

2026 Prediction Card — Product Spec

Overview

A shared "prediction card" for friend groups. One card per group, 24 predictions in a 5×5 grid (with a free center space). Group creates it together, tracks it throughout 2026, marks predictions as they come true.

Not really bingo—no winner, no competition. It's a collaborative prediction artifact with bingo aesthetics.

Core Concept

- Small friend group gets together (New Year's, etc.)
 - Everyone contributes predictions for 2026
 - Predictions fill a shared 5×5 grid
 - Throughout the year, anyone can mark predictions as "happened"
 - Shared link means everyone sees the same card state
-

User Flows

Creating a Card

1. User clicks "Create New Card"
2. Enters a card name (e.g., "The Gang's 2026 Predictions")
3. System generates a unique shareable link/slug
4. User adds predictions (text + their name)
5. Shares link with friends
6. Friends can add their own predictions
7. Once 24 predictions exist, card can be "locked" and grid is formed

Joining a Card

1. User opens shared link
2. Sees card name and current predictions
3. Can add their own predictions (with their name attached)
4. If card is locked, can only view and mark squares

Viewing / Playing (Locked Card)

1. Open the link anytime throughout 2026
 2. See the 5×5 grid with all predictions
 3. Click a square to mark it "happened"
 4. Everyone with the link sees the same state in real-time
-

Features

Feature	Details
Create card	Name + unique URL slug
Add prediction	Text (max 100 chars) + submitter name
24 predictions required	Card can't lock until 24 predictions added
Free space	Center square (position 12), always marked
Mark as happened	Toggle, visible to everyone, reversible
Timestamp on mark	Records when prediction was marked true
Real-time sync	Updates appear for all viewers immediately
Shareable link	Primary access method, no auth required

Card States

Draft

- Fewer than 24 predictions
- Anyone with link can add predictions
- Grid not yet visible (just a list)

Locked / Ready

- Exactly 24 predictions
 - Grid positions assigned (randomized or in order added)
 - No new predictions allowed
 - Users can mark/unmark squares
-

Data Model (Supabase)

Table: cards

Column	Type	Notes
id	uuid	Primary key, auto-generated
name	text	Card title, e.g., "The Gang's 2026 Predictions"
slug	text	URL-friendly unique identifier
is_locked	boolean	Default false, true when card is ready
created_at	timestamp	Auto-generated

Table: predictions

Column	Type	Notes
id	uuid	Primary key, auto-generated
card_id	uuid	Foreign key → cards.id
text	text	The prediction text
submitted_by	text	Name of person who added it
position	int	0-24 grid position (assigned when card locks)
is_marked	boolean	Has this prediction come true? Default false
marked_at	timestamp	Nullable, set when marked
created_at	timestamp	Auto-generated

Supabase Features to Use

- **Real-time subscriptions** on predictions table for live updates
- **Row Level Security (RLS):** Allow read/write for anyone with the card slug (no auth)
- **Unique constraint** on cards.slug

Tech Stack

Layer	Technology
Frontend	React (Vite or Next.js)
Database	Supabase (Postgres)
Real-time	Supabase Realtime
Hosting	Vercel
Auth	None — link-based access

UI Components

Draft Mode View

- Card name as header
- List of current predictions with submitter names
- Input field: prediction text
- Input field: your name
- "Add Prediction" button
- Progress indicator: "18/24 predictions"
- "Lock Card" button (enabled when count = 24)

Locked / Play Mode View

- Card name as header
- 5x5 grid layout
- Each cell shows:
 - Prediction text
 - Submitter name (smaller)
 - Visual indicator if marked (checkmark, highlight, strikethrough)
- Center cell is free space (always marked)
- Click cell to toggle marked state
- Counter: "7/24 predictions came true"

Visual States for Grid Cells

State	Appearance
Unmarked	Default background, normal text
Marked	Highlighted background, checkmark icon, maybe strikethrough text
Free space	Distinct style, always "checked"

URL Structure

/	→ Landing page, "Create New Card" button
/card/[slug]	→ View/interact with specific card

Open Questions (Decide Before Building)

1. Unmark squares?

- Recommendation: Yes, allow toggle (accidents happen)

2. Lock mechanism?

- Option A: Auto-lock when 24th prediction added
- Option B: Manual "Lock Card" button after 24 reached
- Recommendation: Manual lock (gives group time to review/edit)

3. Edit/delete predictions in draft mode?

- Recommendation: Allow delete only (simpler), only your own predictions

4. Prediction limit per person?

- Recommendation: No limit (small groups self-regulate)

5. Grid position assignment?

- Option A: Random shuffle when locked
- Option B: Order added
- Recommendation: Random shuffle (more fun)

6. Visual style?

- Playful and colorful? Minimal and clean? Retro bingo aesthetic?
- Decide before implementation

7. Mobile-first?

- Recommendation: Yes — people will check this on phones mid-year

Out of Scope (V1)

- User authentication / accounts
 - Multiple cards per user dashboard
 - Comments or reactions on predictions
 - Notifications when predictions are marked
 - Export / share as image
 - History of who marked what
-

Success Criteria

A group of friends can:

1. Create a card in ~5 minutes
 2. Share a single link that works for everyone
 3. Open that same link 6 months later and see the current state
 4. Mark a prediction with one tap
 5. See each other's marks in real-time
-

Next Steps

1. Set up Supabase project and tables
2. Scaffold React app with routing
3. Build draft mode (add predictions)
4. Build locked mode (grid view)
5. Add real-time sync
6. Deploy to Vercel
7. Test with a real friend group
